

NOTES:

- S.A.L.T. – Sort, Assess, Lifesaving Interventions, Treatment/Transport
- Patients should be sorted into priority groups , then receive individual assessment, beginning with the 1st priority group
- Lifesaving interventions include
 - Major hemorrhage control
 - Open airway (consider 2 rescue breaths for children)
 - Chest decompression
 - Autoinjector antidotes (MARK I Kit or DuoDote), if appropriate
- Reassess patients as frequently as possible, as patient conditions may change
